

My internship in 300s

Efficient implementation of learning algorithms for remote sensing

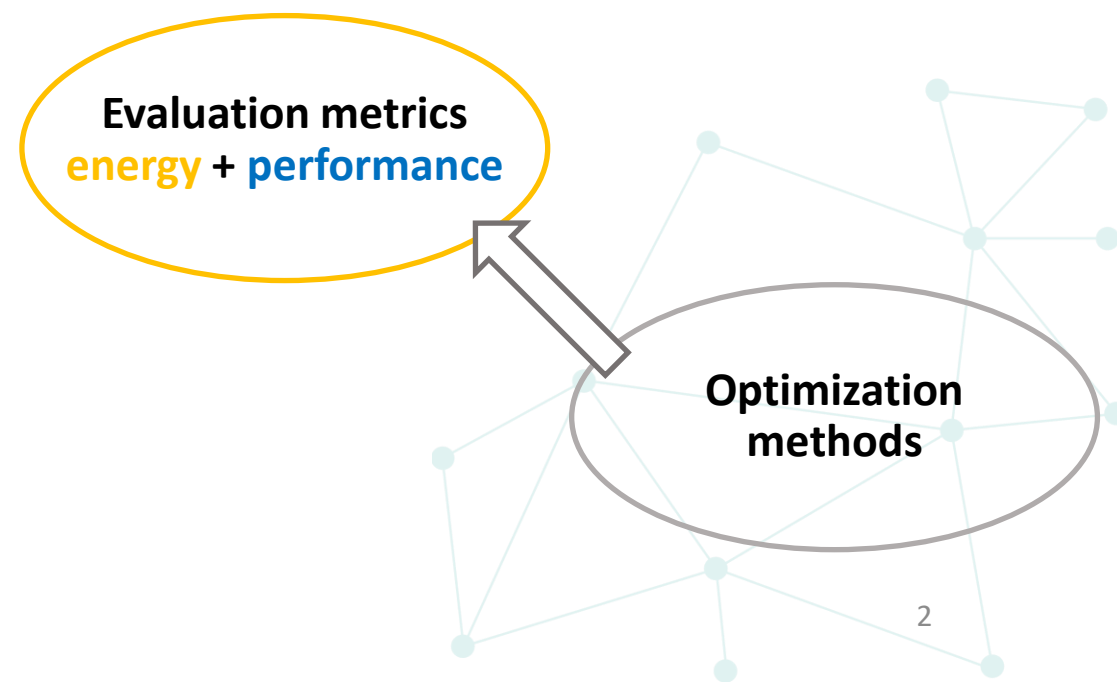

Matthieu Verlynde

AI efficiency, a “must have” in data science

Specificities for remote sensing

- High dimensions
- Poorly labeled data
- Complexity of interpretation

Runtime

Complexity

- Bachmann-Landau descriptor (*Big O*)
- Lines of code, Halstead volume, cyclomatic number...

Empirical measurements

Performances of the model

On the targeted task

Ex : classification accuracy, F1 score...

Emissions in eCO₂

Energy (kWh) × carbon intensity (eCO₂/kWh)

I. Standard algorithms

Consumption data :

Model performances :

Statistical analysis

I. Standard algorithms

Consumption data :

Model performances :

Statistical analysis

II. Standard deep learning

1. Training from scratch

2. Transfer learning

ImageNet \longrightarrow BigEarthNet

3. Looking for new information

BigEarth 

Sumbul et al. (2019)

I. Standard algorithms

Consumption data :

Model performances :

Statistical analysis

II. Standard deep learning

1. Training from scratch

2. Transfer learning

ImageNet \longrightarrow BigEarthNet

3. Looking for new information

Sumbul et al. (2019)

III. Semi-supervised learning

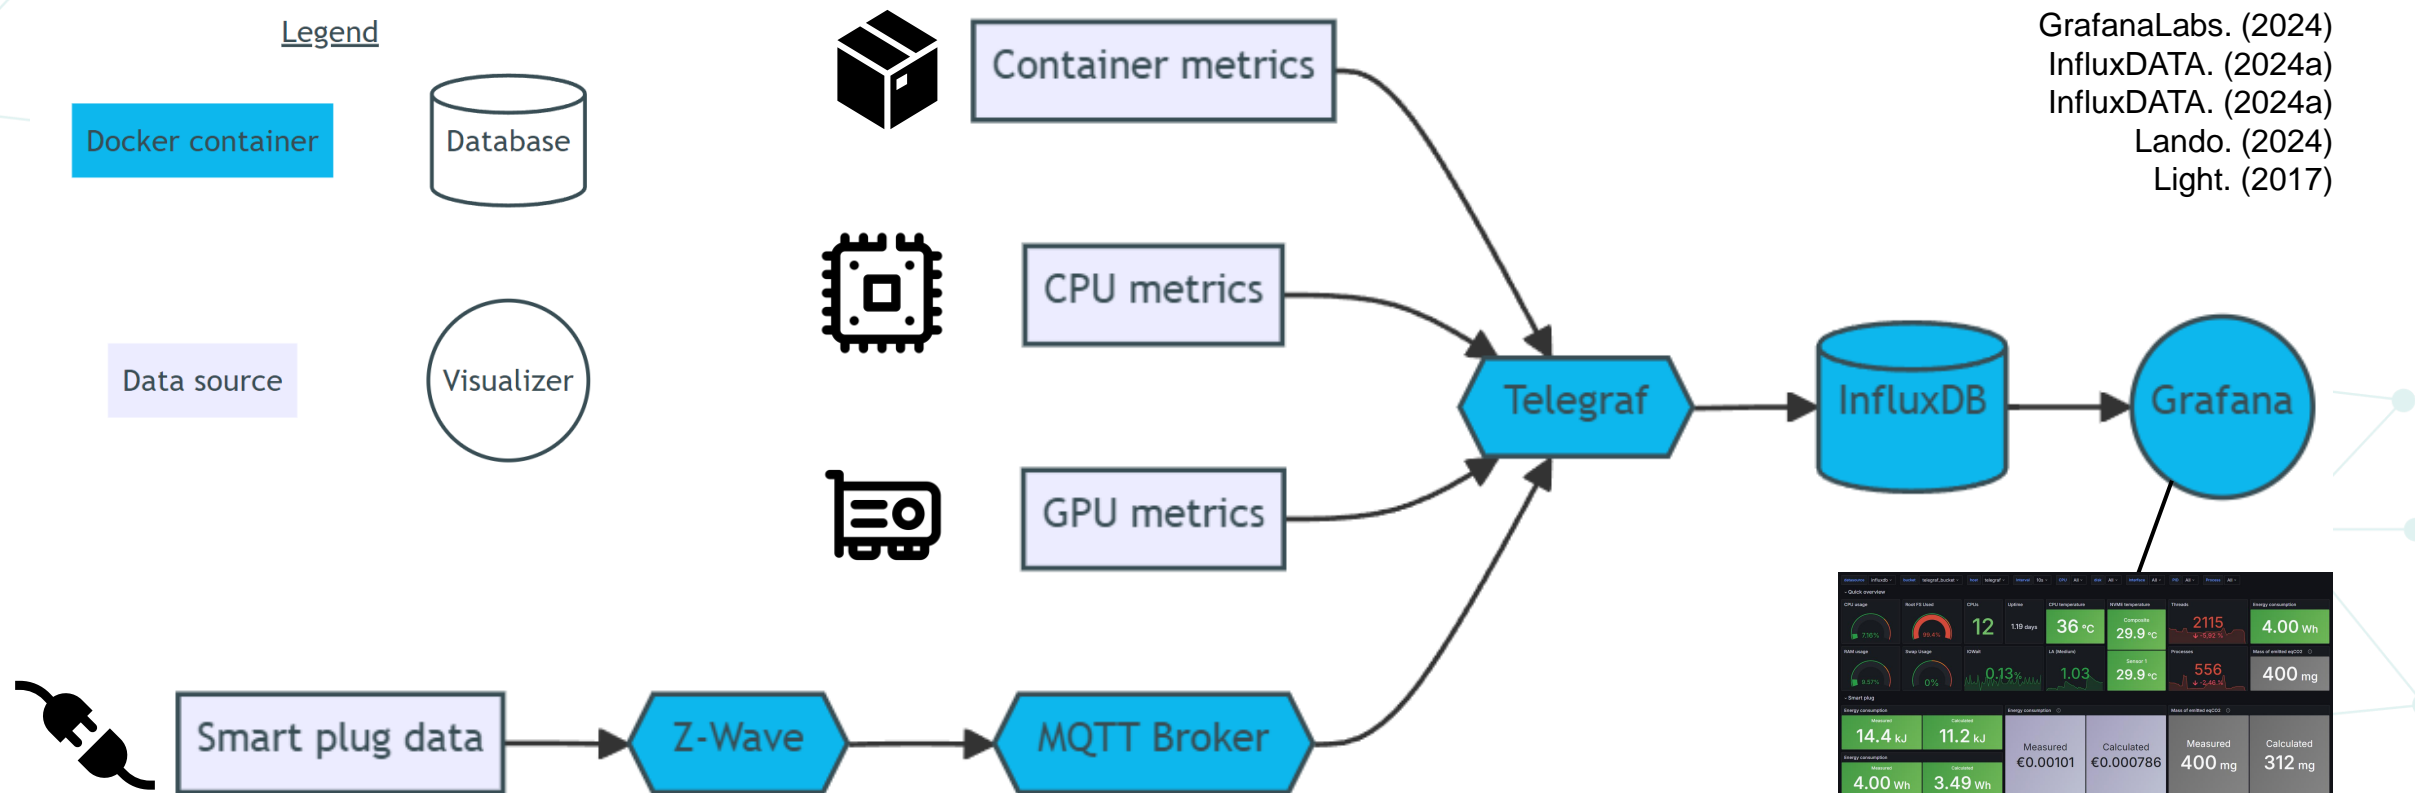

Complex scenario :

Poorly labeled data

Sumbul et al. (2019)

Accessing consumption data

Results

What is next ?

LISTIC

- Compromise performance v. consumption
- Variables influencing consumption
- Compare implementations

➡ Suggest optimizations
